Distinguished by clean lines and natural finishes, mid-century modern design has become a new standard for refinement and style. Moda Mosaic reflects this aesthetic in an offering of crisp geometric shapes realized in luxurious travertine, a favorite of many mid-century architects.

Available Field Styles Shown in Siena Silver

- **Alt Pattern Field**

KEY TO USAGE GUIDE FOR
NATURAL STONE PRODUCTS

Durability Codes
The following codes provide a general guide for the appropriate application of Walker Zanger stock stone products pictured in this catalogue. Please discuss your specific application environment with a sales representative before finalizing your selections.

Light Duty – These stones are suitable for most interior residential uses with the exception of steam showers. They are not generally recommended for commercial paving applications, but are appropriate for very light use commercial interior vertical applications.

Medium Duty – These stones are intended for use in all interior residential applications, including countertops**, patio areas* and flooring. These stones are also appropriate for many commercial applications such as light traffic*** interior flooring and exterior* and interior vertical applications.

Heavy Duty – These stones are extremely hard, making them suitable for all light and medium duty applications as well as most interior and exterior* commercial applications. Recommended uses include heavy traffic*** interior flooring and exterior* and interior vertical applications.

Variation and Uniformity Codes
Natural stones are products of nature, and no two pieces are exactly alike. These codes are intended as a general guide to how much variation in color, movement and veining can be expected in the stone products that appear in this catalogue.

Architects and Designers please note: Contact a Walker Zanger Architectural Sales Representative to ensure material suitability before making final specifications for commercial projects.

* Some Medium and Heavy Duty stones cannot be used in exterior applications in areas that experience freeze/thaw conditions. Please see specific stone in Usage Guide for this information.

** Some Medium Duty stones may be subject to scratching or etching when used as countertops. Please see note about Stone Countertops located in the left column of this page.

*** Light, Medium and Heavy traffic refer to pedestrian traffic only. If stone is to be installed in an area with vehicular traffic, please contact a Walker Zanger Architectural Sales Representative to inquire about thickness and installation requirements.

Attention to quality materials and the application procedures in this catalog require that you consult Walker Zanger sales representatives. Additional product information, including the Limited, Moderate and Wide Variation Codes, can be found in the Variation and Uniformity Codes section.

KEY TO SYMBOLS
- Not recommended in areas that experience frequent wet conditions (such as showers), unless sealed as a normal maintenance procedure. If used for shower floors, must include waterproof membrane on substrate prior to tile installation.
- Must be installed with water-free epoxy thinset. Do not use any setting material in which water must be used.
- White thin-set or mortar is required. This is the case for all limestones, tumbled stones, “antiqued stones” and light colored marbles.
- May be characterized by dry seams, pits, fossils and glass veins. In polished and honed stones, these areas are often filled at the factory. In rustic or tumbled stones as well as with some honed limestones, these are often filled with grout during installation. Whether filled at the factory or during installation, the fill can work its way out of the voids. In these instances, it may be necessary to refill these voids as part of a normal maintenance procedure.
- May be used outside in areas that experience freeze/thaw conditions. Contact your Walker Zanger sales representative for installation guidelines.
- Not recommended for use in pools, and spas.
