Velluto

Introducing a new product innovation that reimagines the look and tactile experience of porcelain. Velluto, or 'Velvet' in Italian, is a cutting-edge new 3D-Shaped Technology that enriches two-dimensional structures with recesses, reliefs, and veins that change the perception of a surface.

This new realistic effect echoes the graphic motif of grès porcelain, bringing out the elegance of precious marble and all of its nuances and intense veining. Velluto's palette of white, grey, and almond shades embodies nature's balance while the veins and innovative depressions change the perception of ceramic surfaces. This collection is ideal for commercial and residential flooring, countertops, and wall applications.
